Instructions to deploy the code

R and Python

1. Open the file in the environment.
2. Load the libraries.
3. Load the data accordingly.
4. Proceed with the steps as mentioned.
5. After processing the feature scaling methods choose the algorithm widely.
6. You can run the "for use" code to deploy the algorithm.
7. Or can simply go with "for check" to check the algorithm work.

Please note: we need to process each step again to deploy another algorithm in the dataset.
